

New Apartment Block in St Johns Wood

NOW FIRST LIMITED

St John's Wood London NW8

Size: 1,060m²
Value: £4.5m
Status: Completed
Type: Residential development for developer

A new build seven storey apartment block including basement level to create nine residential units.

This new build was designed as a reinforced concrete framed superstructure with a thin gauge metal dormer roof structure. The structure was designed to be founded on piled and raft foundations.

The director supervised staff to provide structural design services up to RIBA stage four. These services included a Thames Water mains sewer diversion, party wall consent and negotiations with Transport for London.
