

Structural Design of a Series of Bronze Sculptures

NOW FIRST LIMITED

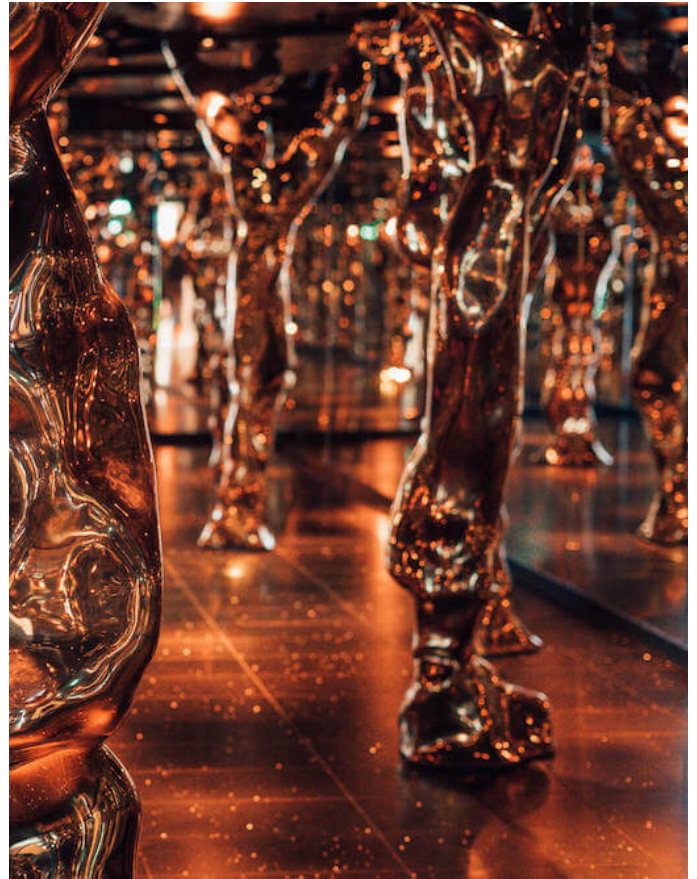

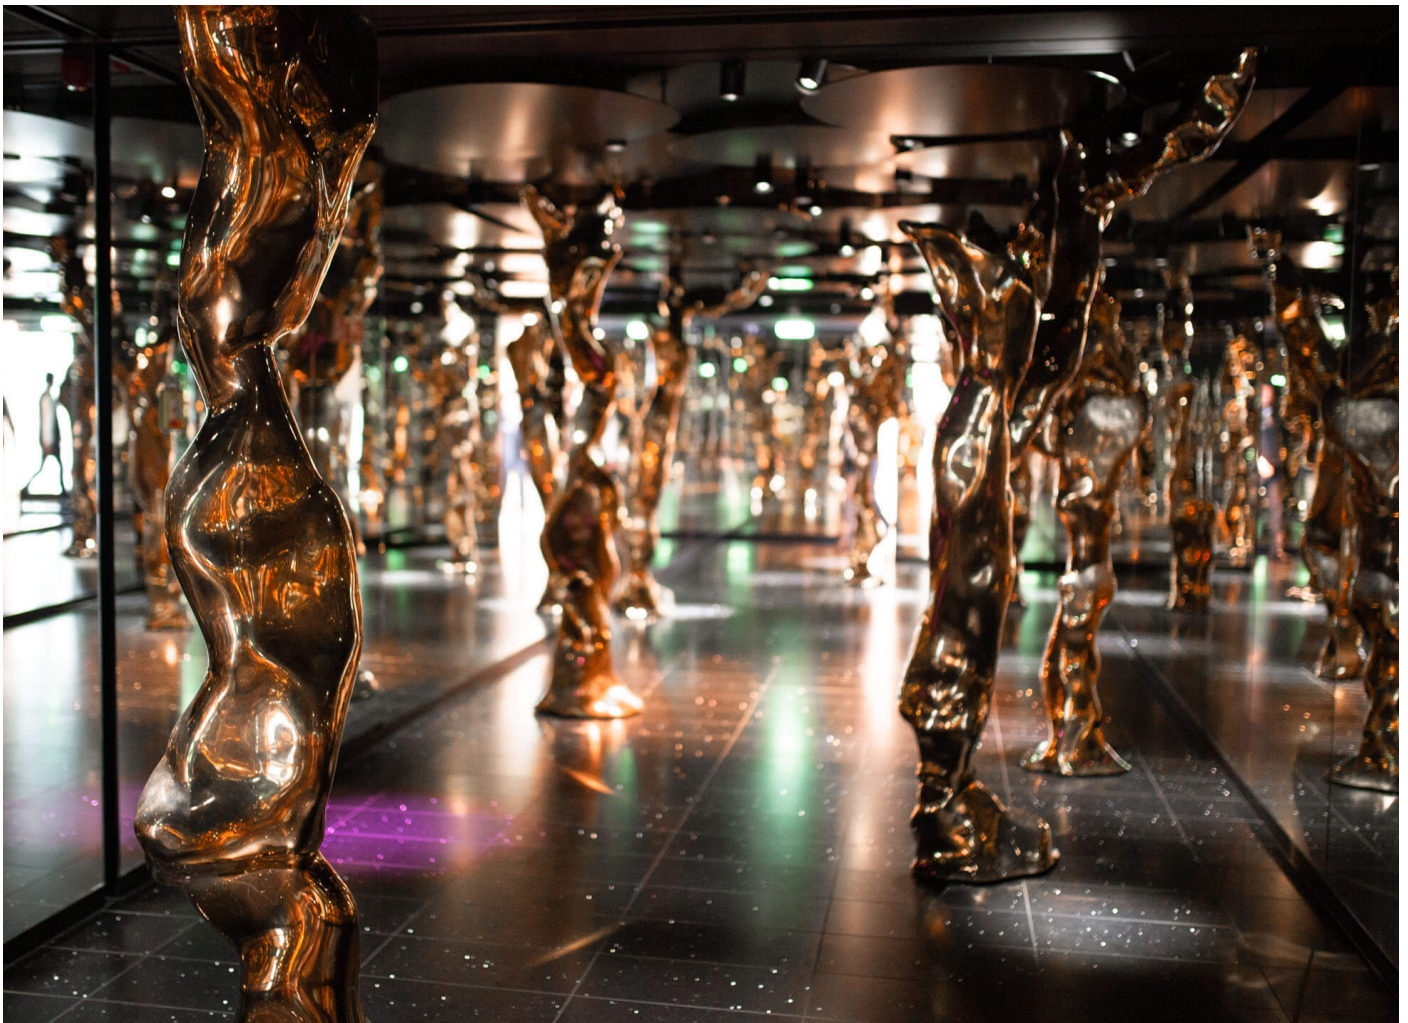

Structural Design of a Series of Bronze Sculptures

Size: 2.5m high
Value: Undisclosed
Status: Completed
Type: Special project / Work of Art

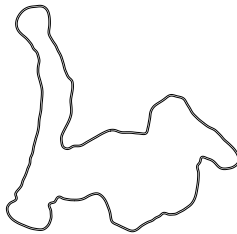

Structural design of a series of bronze sculptures and their supports for installation on a cruise ship.

The Bronze sculptures had to be designed to remain stable when the boat rocked during a storm event. We provided design checks that analysed the sculptures natural frequency and the worst case loadings at their support points. We also provided structural design services to allow the support connections to be fabricated.

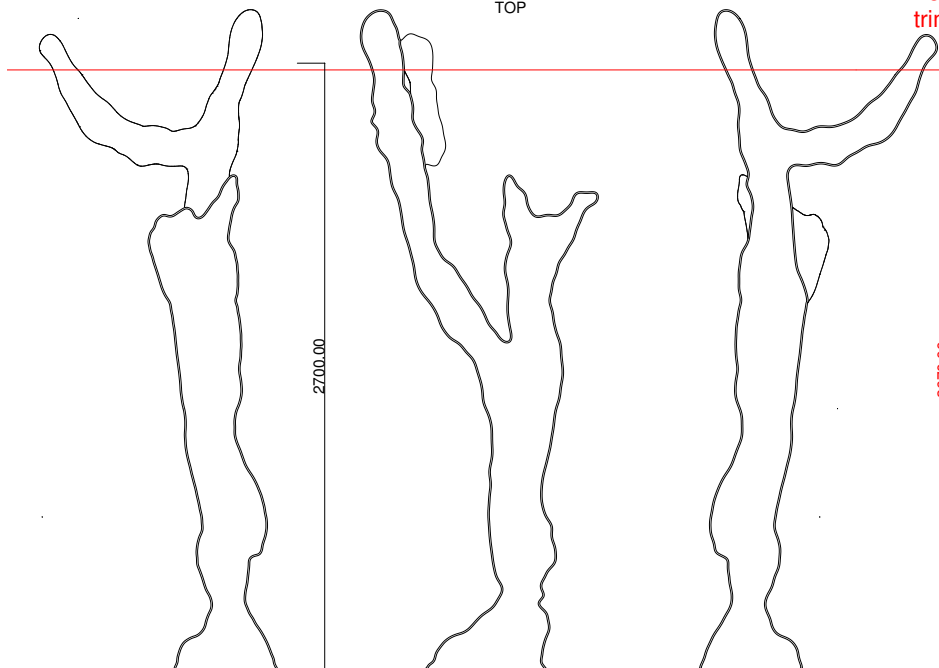

TREE 05

TOP

Tree Weight: Approx. 185kg

Top of trees need to be trimmed to 2670mm height
