Large Scale Glass Sculpture Structural Design

Size: 5m high
Value: Undisclosed
Status: Completed
Type: Special project / Work of Art

Structural design of a series of glass sculptures and their inner steel framework to allow for installation and transportation.

The glass blocks were not stable without an internal support structure. We designed an elegant steel frame formed from five sections. Each section was light enough for a forklift truck to move each section. This allowed the sculpture to be assembled and disassembled as required, which enabled it to be exhibited in various locations.

The steel frame without the sculpture is illustrated to the right.
